

Synthetic boundary layout sample

This is an artificial constant case, not a model result. None of the 9 weight-space features with a defined four-fold comparison meets the declared out-of-dose predictive criterion. All nine features and all four folds are retained. Undefined folds are not pooled as available cases. This is prediction outside a learning-rate dose on the same task suite, not causal mediation, statistical significance or evidence of equivalence.

Geometry feature	RMSE reduction	Improved	Defined	Criterion	Residual ρ
log segment/weight norm	+0	0/4	4/4	baseline equivalent	—
segment stable-rank fraction	+0	0/4	4/4	baseline equivalent	—
segment effective-rank fraction	+0	0/4	4/4	baseline equivalent	—
segment row-norm CV	+0	0/4	4/4	baseline equivalent	—
segment top-1% row energy	+0	0/4	4/4	baseline equivalent	—
cumulative/weight norm	+0	0/4	4/4	baseline equivalent	—
cumulative stable-rank fraction	+0	0/4	4/4	baseline equivalent	—
segment subspace overlap to AdamW	+0	0/4	4/4	baseline equivalent	—
cumulative subspace overlap to AdamW	+0	0/4	4/4	baseline equivalent	—

Table 1: Every original weight-space predictor under four-fold leave-dose-index-out prediction. Decisions use exact MSE comparisons, not displayed RMSE. A missing correlation is undefined, not zero; baseline equivalence is distinct from an unidentified or numerically unresolved prediction.
